

PLF SERIE

DER FLACHE

## PLF-SERIES THE FLAT

Das Zylinderrohr ist achsial durchgehend geschlitzt. Die Kraftabgabe erfolgt über eine Lastkupplung, welche an der Kolbenachse befestigt ist; letztere ist so ausgebildet, dass ein durch den Rohrschlitz geführter Steg den inneren Teil der Kolbenachse mit dem äußeren Teil verbindet.

Der Kraftverlauf ist also:

Luftdruck → Kolbenfläche → Kolbenachse (innen) → Kolbenachse (außen) → Lastkupplung → Werkstück!

Die druckfeste Abdichtung des Zylinderschlitzes wird mit einem präzisionsgeschliffenen, innen liegenden Stahlband erreicht; dieses wird mit 2 längs des Schlitzes verlaufenden Magnetstreifen in Position gehalten.

Ein zweites Stahlband befindet sich außen auf dem Schlitz des Rohres. Es dient der Staubabdeckung. Beide Stahlbänder werden während der Kolbenfahrt genauso wie bei Stillstand hinter der Kolbenabdichtung vom Schlitz abgehoben und jeweils mittels eines eigenen Führungskanals durch die Kolbenachse geleitet. Davor und dahinter legen sich die Bänder wieder dichtend über den Zylinderschlitz.

The entire tube is slotted throughout its full length. The force is transmitted through the load friction, which is attached to the piston axle. The design of the piston axle is that way that the inner part of the piston axle is connected through the slot with the outer part of it.

Therefore the force transmission runs as follows:

Air pressure → Piston area → piston axle (inner part) → piston axle (outer part) → load friction → load.

The sealing of the cylinder slot is guaranteed by a most precisely grinded inner steel band. The inner band is kept in position due to magnet stripes which are placed on both sides of the slot. In addition there is an outer steel band covering the slot in order to keep dust out of inner space of the cylinder.

During piston movement as well as during stillstand of it both steel-bands are lifted right after the piston seal and led through the piston axle by means of a separate own guiding channel. Before and behind the piston axle both bands are covering the slot permanently again.

## VORZÜGE / BENEFITS

- Gleiche Kräfte in beiden Richtungen
- Kraftabgabe direkt, verdrehgesichert
- Kolben wahlweise mit oder ohne Magnet
- Halbierte Einbaulänge – raumsparend
- Extreme Hublänge → 5700mm
- 3facher Luftanschluss, Endlagendämpfung beidseitig, einstellbar
- Hohe Beschleunigungen und Geschwindigkeiten
- Hoher konstruktiver Freiheitsgrad
- Betrieb mit geölter oder ungeölter Luft \*\*)
- 3stufige Dämpfungscharakteristik zur Schonung von Dämpf- und Lastsystem\*)
- Einsatz in EX-Bereich möglich - ATEX

\*) Sonderausführung auf Anfrage.

\*\*\*) Achtung: Vorangegangene Inbetriebnahme mit geölter Luft schließt die Umstellung auf nicht geölte Luft ohne vorherige Demontage, Reinigung und Nachfettung (Grundfetttschmierung) des Zylinders aus.

- Equal forces on both ends of the piston
- Force connection direct, torque safe
- Piston with or without magnets
- 50% space-savings
- Long strokes up to → 5700mm
- End caps with 3 air connections and adjustable cushioning
- Fast acceleration and high piston velocity
- Very flexible in the user`s design
- Non lubricated or lubricated air supply\*\*)
- 3 stage cushioning characteristics for protection of the cushioning- and loadsystem \*)
- Use in EX area possible - ATEX

\*) Special Version On request

\*\*\*) Attention: Before changing operation from lubricated to nonlubricated air the cylinder has to be disassembled, cleaned, newly greased and reassembled

| 63       | 36 | 1550             | 40         | 1650                  | 200                               | 8         | 24,0                     |

Die Tabellenangaben stellen die höchstzulässigen Werte bei stoßfreiem Betrieb und Geschwindigkeiten von  $v \leq 0,2\text{m/sec}$  [PL-Serie] –  $v \leq 0,45\text{m/sec}$  [PLF-Serie] dar. Max. 6 bar.  
Eine Überschreitung, auch kurzfristig, der Werte im dynamisierten Bereich ist unzulässig.

**Achtung:** Im grenznahen Einsatzfall können resultierende Kräfte zu einer Überschreitung der zulässigen Grenzwerte führen. Bei undefinierbaren Situationen ist daher eine Unterschreitung der zulässigen Belastungswerte um 10–20% notwendig.

Bitte fragen Sie unseren Außendienst.

The figures above are max. values based on light shock free duty and speed of  $v \leq 0,2\text{m/sec}$  [PL-series] –  $v \leq 0,45\text{m/sec}$  [PLF-series]. Max. pressure 6 bar.  
An exceeding of the values in dynamic operations, even for short moments, has to be avoided.

**Attention:** Resulting forces could lead to extreme exceedings of the values. In case of undefinable situations the above max. values have to be reduced by 10–20%.

Please ask our sales representatives

# DÄMPFUNGS-DIAGRAMM / CUSHIONING DIAGRAM

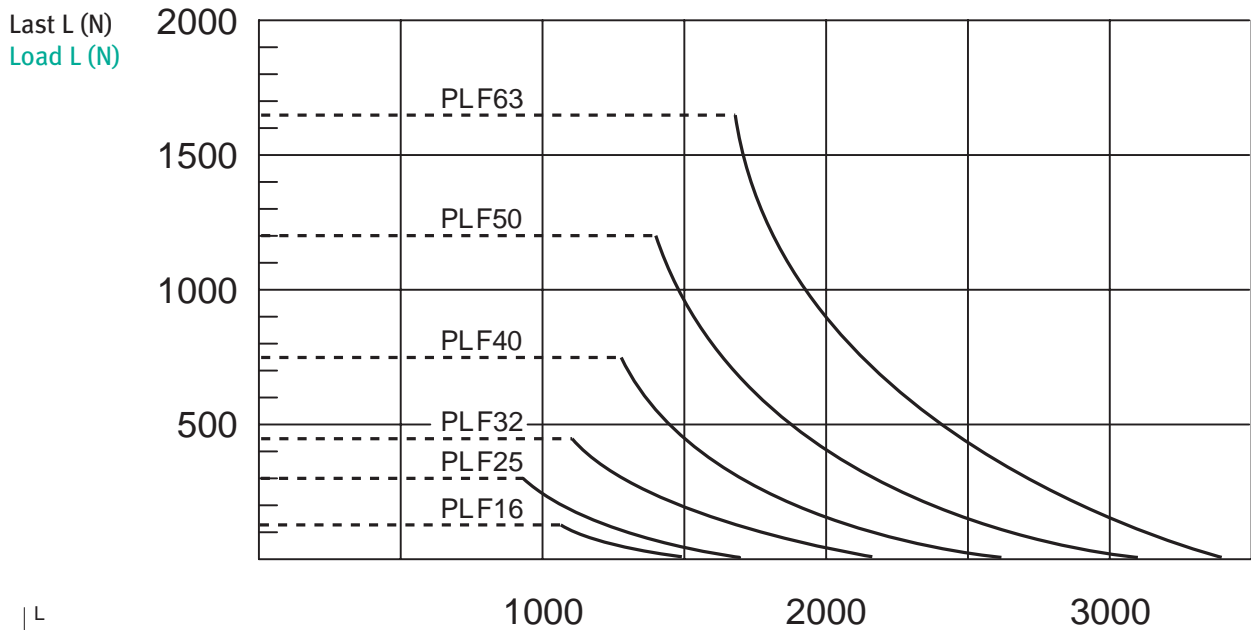

### Bitte beachten Sie:

- Bei Überschreitung der zulässigen Grenzwerte müssen externe Stoßdämpfer eingebaut werden.
- Bei Kolbengeschwindigkeiten  $\geq 1\text{m/s}$  werden Vitondichtungen empfohlen.
- Bei Kolbengeschwindigkeiten  $\leq 0,1\text{m/s}$  (NBR),  $\leq 0,2\text{m/s}$  (VITON) wird Spezialfett Nr. IX empfohlen, siehe Ersatzteile.
- Bei Kolbengeschwindigkeiten unter  $1\text{m/s}$  wird eine optimale Dichtungs-Lebensdauer erreicht.

### Pay attention to the following points:

- If the limits above are exceeded additional shock absorbers are necessary.
- For piston speeds of more than  $\geq 1\text{m/s}$  viton seals are recommended.
- For piston speeds  $\leq 0,1\text{m/s}$  (NBR),  $\leq 0,2\text{m/s}$  (VITON) slow speed lubrication is necessary see at sperpart kids
- Maximum duration life will be achieved when piston speeds do not exceed  $1\text{m/s}$ .

# STÜTZLÄNGEN-DIAGRAMM / DEFLECTION DIAGRAM

Durchbiegung 1mm  
Deflection 1mm

max. Stützlänge (SL) in mm - ohne Mittenstücke Nr. 25  
max. distance (SL) in mm - free of mounting No. 25

**Diagramm-Information:**

- Rechnerische Durchbiegungen ohne Unterstützung von 0,5 – 1mm ermöglichen größere Stützlänge.
- Rechnerische Durchbiegungen ohne Unterstützung von > 1 – max. 1,5mm erfordern geringere Stützlänge.

**Diagram Information:**

- Calculated deflections without support of 0,5 – 1mm allow exceeding of supporting distance.
- Calculated deflections without support of 1mm – max 1,5mm require reduction of the supporting distance.
